UK House Price Index

Dashboard Suite — User Guide

Comprehensive instructions for navigating and interpreting the four organizational-level dashboards

Dataset	HPIAdmins · UK Metropolitan House Prices
Period	January 1995 — December 2019
Regions	6 Metropolitan Areas (Greater Manchester, Merseyside, South Yorkshire, Tyne and Wear, West Midlands, West Yorkshire)
Records	1,788 cleaned observations
Dashboards	4 HTML files — CEO · Executive Committee · Managers · Operations
Generated	15 May 2026

1. Introduction

This user guide provides detailed instructions for all four HPI Admins dashboards. Each dashboard was designed for a specific organizational level, presenting the same underlying dataset through a lens suited to that audience's decisions and questions.

The dashboards are standalone HTML files. No internet connection is required after the initial load (Chart.js is loaded from a CDN on first open — subsequent offline use works if the browser has cached the library).

Dashboard Overview

File	Audience	Purpose	Key Feature
CEO_HPIAdmins.html	CEO / Board	Strategic market overview	Headline KPIs + 21-yr trend
ExCo_HPIAdmins.html	Executive Committee	Regional & segment strategy	4 navigable tabs
Mgr_HPIAdmins.html	Managers	Regional operational view	Filterable by region & year
Ops_HPIAdmins.html	Operations / Analysts	Full data console	1,572-row searchable table

Tip: All four dashboards open directly in any modern browser (Chrome, Edge, Firefox, Safari). No installation or plugins required.

2. Data Overview

The source data is the UK House Price Index (HPI), covering six metropolitan areas in England. The data was sourced from ONS/Land Registry records and cleaned into **HPIAdmins_v1.xlsx**.

Regions Covered

Region	Area	Price (Jan 1995)	Price (Dec 2019)	Total Growth
West Midlands	Midlands	£45,091	£191,079	+323.8%
Greater Manchester	Northwest	£41,238	£170,855	+314.3%
South Yorkshire	North	£39,197	£157,518	+301.9%
West Yorkshire	North	£44,583	£173,156	+288.4%
Tyne and Wear	North	£41,449	£158,053	+281.3%
Merseyside	Northwest	£41,723	£154,075	+269.3%

Data Cleaning Notes

- **Dropped columns:** IndexSA and AveragePriceSA — 100% null across all records.
- **Column renaming:** % characters removed from column names (e.g. 12m%Change → 12mPctChange) for compatibility.
- **DataGapFlag column added:** 12 rows (Nov–Dec 2016, all 6 regions) have SalesVolume = 0. These are flagged True and visible in the Operations dashboard.
- **Partial nulls retained:** 1m and 12m % change columns are null for the first 1 and 12 months respectively — this is expected (no prior period to compare against).

Key Market Statistics

Average price (Dec 2019)	**£167,456 across all 6 regions**
Average price (Jan 1995)	**£42,213 across all 6 regions**
Overall market growth	**+296.7% over 24 years**
Fastest growing region	**West Midlands at +323.8% total**
Highest priced region	**West Midlands at £191,079 (Dec 2019)**
Detached vs Flat premium	**+143.8% on average (latest month)**
Monthly transaction volume	**10,865 combined transactions (Dec 2019)**
Price spread (region gap)	**£37,004 between highest and lowest region**

CEO Dashboard

CEO_HPIAdmins.html

Designed for C-Suite executives. Provides a definitive strategic overview with no operational noise.

Purpose

This dashboard answers one question: *How is the market performing and where is it heading?* It presents the minimum information needed for a strategic decision or board-level discussion. No filters, no tabs — just the signal.

Sections at a Glance

- **4 Headline KPIs (top row):** Market average price, 21-year total growth, leading region by appreciation, and combined monthly transaction volume.
- **21-Year Annual Trend chart:** The market-wide average price per year from 1995 to 2019. Gold area chart highlights the sustained growth trajectory and the 2008 dip.
- **Regional Growth Ranking:** A horizontal bar visual showing which region appreciated most. Length of bar = relative growth magnitude.
- **Regional Price Trajectories:** All 6 regions on one chart — showing convergence, divergence, and relative positioning over time.
- **Current Price Spread bar:** Latest average price per region sorted from highest to lowest — instant competitive ranking.

How to Use

1	**Open the file** Double-click CEO_HPIAdmins.html. It opens in your default browser.
2	**Read the KPIs** Top row shows the four headline numbers. All reference December 2019 (latest full data month).
3	**Scan the trend** The gold area chart shows annual averages. The slope steepness tells the growth story at a glance.
4	**Check regional ranking** The growth bar table on the right ranks regions by total appreciation — useful for portfolio discussions.
5	**Compare current prices** The sorted bar chart (bottom right) shows today's price hierarchy across regions.

Tip: Key talking point: The market average grew +296.7% in 21 years — from £42k to £167k. West Midlands leads all regions at +323.8% total appreciation.

Executive Committee Dashboard

ExCo_HPIAdmins.html

For senior leadership. Delivers strategic depth via four navigable tabs covering market, regions, segments, and growth.

Purpose

Provides the analytical depth that executive committees need: regional benchmarking, property segment analysis, and multi-year growth dynamics. The tabbed interface lets each committee member navigate to the view most relevant to their portfolio.

Tab Guide

TAB 1 — MARKET OVERVIEW

Aggregate market view. Contains: 5 KPI indicators (avg price, growth, top region, volume, price spread); interactive price trend by region (click legends to toggle regions); YoY % change bar chart; annual area chart; total volume trend.

TAB 2 — REGIONAL ANALYSIS

Six region cards showing: current avg price, YoY badge (green = positive, red = negative), monthly volume, and property type sub-prices. Below the cards: full historical price chart and a start-vs-end grouped bar comparison.

TAB 3 — PROPERTY SEGMENTS

Grouped bar chart: Detached, Semi-Detached, Terraced, and Flat prices side-by-side per region. Horizontal bar shows Detached-Flat premium per region (market average: +143.8%). Annual trend lines show each segment's trajectory 1995–2019.

TAB 4 — GROWTH DYNAMICS

Rolling YoY % change chart for all 6 regions — this is where the 2007–2009 downturn and subsequent recovery are most visible. Summary table shows each region's 1995 start price, 2019 end price, and total % appreciation ranked by growth.

How to Use

1	**Open the file** Double-click ExCo_HPIAdmins.html. The Market Overview tab loads by default.
2	**Navigate tabs** Click the tab labels at the top (Market Overview / Regional Analysis / Property Segments / Growth Dynamics).
3	**Toggle regions (Tab 1)** In the price trend chart, click a region name in the legend below the chart to show/hide that region.
4	**Read region cards (Tab 2)** Each card shows the YoY % badge — green means price rose year-on-year, red means it fell.
5	**Assess segment gap (Tab 3)** The horizontal bar chart ranks regions by their Detached-vs-Flat price gap — useful for investment targeting.
6	**Spot the crisis (Tab 4)** In the YoY chart, look for the dip around 2008–2009. This is the financial crisis impact — followed by the recovery.

Managers Dashboard

Mgr_HPIAdmins.html

For regional and department managers. Filter by your region and time range to monitor local performance.

Purpose

Gives managers the ability to zoom into their own region's performance without being overwhelmed by data from other areas. The filter bar at the top drives all charts simultaneously, turning a market-wide view into a focused regional briefing in seconds.

Filter Bar Controls

Region selector	Drop-down list. Select 'All Regions' for a market-wide view, or pick one region to isolate all charts to that area.
From year slider	Drag left/right to set the start of the analysis window. The year value updates live next to the slider.
To year slider	Drag left/right to set the end of the analysis window. Use a narrow range (e.g. 2010–2019) for recent-period focus.

Dashboard Sections

- **Region Status Cards (top row):** One card per region. Shows current avg price, colour-coded YoY badge, and monthly volume. The coloured top bar matches the region's chart colour.
- **6 KPI indicators:** Market avg price, overall growth, highest/lowest priced region, fastest-growing region, and total monthly volume.
- **Average Price Trend:** Monthly prices filtered by region and year range. Multiple regions display as coloured lines.
- **Monthly Volume chart:** Transactions per month — useful for spotting seasonal dips and market activity patterns.
- **YoY % Change:** 12-month rolling change — shows whether your market is in growth or decline phase.
- **MoM % Change:** 1-month change — early warning signal for short-term shifts.
- **Property Type chart:** All four property types per region at the latest month — compare your regional mix.
- **Regional Ranking Table:** Sortable. Click any column header to rank regions by that metric.

How to Use

1	**Open the file** Double-click Mgr_HPIAdmins.html in a browser.
2	**Select your region** Use the Region drop-down at the top. All 4 trend charts and KPIs update immediately.
3	**Set your time window** Use From/To year sliders to focus on a specific period (e.g. post-2010 for recent trends).
4	**Read region cards** Find your region's card at the top — note YoY badge colour (green = growth, red = decline).
5	**Monitor MoM signals** The MoM % chart is the earliest indicator. Negative readings for 2+ months signal a softening market.

6

Use the ranking table

Click 'YoY' column to rank regions by year-on-year growth. Click 'Avg Price' to rank by price level.

Operations Dashboard

Ops_HPIAdmins.html

For analysts and data teams. Full data console with every row, every metric, and real-time filtering.

Purpose

The Operations dashboard gives analysts complete transparency into the underlying data. Every metric from the cleaned dataset is accessible — filterable, searchable, and sortable. It is designed for data validation, deep-dive analysis, and quality control tasks.

Control Bar

Region	Filter all charts and the data table to a specific region, or keep 'ALL' for full dataset.
From / To year	Year range sliders. Narrow the window to focus analysis on a specific period.
Search box	Type a region name, date (YYYY-MM format), or area name. The table filters instantly as you type.
Rows/page	Set how many records appear per table page: 20, 50, or 100.
Metric selector	Switch the primary trend chart between: Avg Price, Volume, YoY %, or MoM %.

Status Bar

Seven live counters at the top of the page update with every filter change:

- **Total Rows:** Always 1,572 (full dataset minus flagged gap rows).
- **Filtered Rows:** Number of records matching the current filter combination.
- **Data Gaps:** Count of rows with SalesVolume = 0 in the current filter scope.
- **Avg Price / Avg YoY / Total Vol:** Aggregated from filtered rows only.
- **Date Range:** Shows the earliest and latest date in the current filter.

Data Table

- Click any column header to sort ascending. Click again to sort descending.
- The search box filters across region name, area, and date simultaneously.
- Rows where SalesVolume = 0 display a ■ warning icon — these are the 12 data gap rows (Nov–Dec 2016).
- Use Rows/page = 100 and search a specific region to review its full history on one page.

How to Use

1	**Open the file** Double-click Ops_HPIAdmins.html. All 1,572 valid rows load by default.
2	**Apply filters** Select region and year range — the status bar, all 5 charts, and the table all update together.
3	**Search the table** Type 'Greater Manchester' or '2008-' to quickly isolate specific records in the table.

4	**Sort columns** Click any table header to sort. Useful: sort by YoY % to find the highest/lowest growth months.
5	**Switch metrics** Use the Metric selector to switch the primary trend chart from price to volume, YoY %, or MoM %.
6	**Spot data gaps** Sort by Volume ascending — the 12 flagged gap rows (Nov–Dec 2016) will surface at the top with ■ warnings.
7	**Paginate** Use Prev/Next buttons to navigate pages. The page count and row range update at the bottom of the table.

7. Data Dictionary

All fields available in HPIAdmins_v1.xlsx and reflected in the dashboards:

Field	Type	Description
Date	Date	First day of the month (e.g. 2005-03-01)
RegionName	Text	Name of the metropolitan region
Area	Text	Broad area (North, Northwest, Midlands)
AreaCode	Text	ONS geographic code for the region
AveragePrice	£	Mean house price across all property types
Index	Float	HPI index value (base = 100 at a reference point)
1mPctChange	%	Month-on-month % price change (null for Jan 1995)
12mPctChange	%	Year-on-year % price change (null for first 12 months)
SalesVolume	Int	Number of transactions recorded that month
DetachedPrice	£	Average price for detached properties
DetachedIndex	Float	HPI index for detached properties
Detached1mPctChange	%	MoM change for detached properties
Detached12mPctChange	%	YoY change for detached properties
SemiDetachedPrice	£	Average price for semi-detached properties
SemiDetachedIndex	Float	HPI index for semi-detached properties
SemiDetached1mPctChange	%	MoM change for semi-detached
SemiDetached12mPctChange	%	YoY change for semi-detached
TerracedPrice	£	Average price for terraced properties
TerracedIndex	Float	HPI index for terraced properties
Terraced1mPctChange	%	MoM change for terraced
Terraced12mPctChange	%	YoY change for terraced
FlatPrice	£	Average price for flats/apartments
FlatIndex	Float	HPI index for flats
Flat1mPctChange	%	MoM change for flats
Flat12mPctChange	%	YoY change for flats
DataGapFlag	Bool	True = SalesVolume is 0 (data not reported). Affects Nov–Dec 2016 only.

Tip: All dashboards read from pre-computed data embedded at generation time. To refresh with updated data, re-run the Python generation scripts with the new HPIAdmins_v1.xlsx.
